Biomass – operation

We receive our raw material (sheets of folding card) on pallets of different sizes normally sized to fit the material. i.e not standard.

Which means these cannot be used for any thing else so are in affect waste after we have removed the material. These pallets are chipped on site to create the woodchip, and they are used in your own RHY AK 400 biomass boiler to heat the factory. Ash is disposed of responsibly in dedicated skips.

All wood is completely clean and free from any contamination
